

solflo PV DIRECT HOT WATER

THE MOST SIMPLE ENERGY EFFICIENT, HOT WATER!

FEATURES

- Optimal performance with 99.6% electrical efficiency.
- No moving parts, no pumps or complicated plumbing.
- Weather-resistant design, ground-mounted tank and controller.
- Zero Emissions.
- Frost-Tolerant Reliability: Works even in freezing temperatures.

HOW IT WORKS

PV Direct Hot Water is simple and straightforward. No pumps or moving parts make installation hassle-free. This system uses solar panels to convert DC energy into efficient hot water. The weather-resistant design ensures durability, while zero emissions contribute to a greener future. Even in freezing temperatures, the system works reliably with sunlight.

ADVANTAGES

- **Unbeatable Savings:** Slash up to an incredible 90% off water heating costs, compared to traditional water heating methods. Enjoy a cost-effective and sustainable solution.
- **Effortless Ownership:** Experience quick and easy installation with minimal maintenance required.
- **Long-Lasting Investment:** Enjoy years of reliable service thanks to its robust design and protection from the elements.
- **Eco-Conscious Living:** Contribute to a cleaner planet by embracing a system with zero harmful emissions.
- **All-Weather Assurance:** Even in harsh weather conditions, you can count on a steady supply of hot water, thanks to the frost-tolerant design.
